To Whom It May Concern:

I am delighted to provide this letter of recommendation in support of Riyaan Jain's job application. Having worked closely with Riyaan for close to a year, I can confidently say that he is a supremely qualified and highly competent individual who was a valuable asset to our company during his employment.

I am the Chief Technology Officer at StructureIQ, where I lead the development of civil infrastructure monitoring applications using AI-enabled smart IoT wireless sensors. StructureIQ is based in Champaign, Illinois, and we often hire University of Illinois students to assist in our work. In this capacity, I was Riyaan's direct supervisor during his time at StructureIQ from July 2025 to April 2026.

As a small company, every hire we make is critical to our success, and our standards are high. When we hired Riyaan as a Hardware Engineer, we weren't simply looking for someone to work with us, but to take the lead in developing the hardware for our next-generation smart sensor product. Starting with a vision for the device, a set of technical requirements, and a few key components, Riyaan was tasked with conceptualizing and then implementing the PCB for our smart IoT wireless sensor. This was a highly complex project, encompassing several sensors and digital buses for communication between the embedded processor and peripherals.

As none of our team members are hardware engineers and only possess limited experience in this area, it was Riyaan who led the project, from start to finish. He selected the components, developed the schematics and the layout for the PCB, which culminated in the creation of a proof-of-concept prototype and, after its successful validation, a production model of the board based on that design, which was smaller, cheaper, and more efficient than our prior product. In the course of the project, Riyaan had to independently learn several new tools, workflows, and design methodologies, demonstrating an aptitude for on-the-job learning and adaptability. Also, he took a proactive, self-directed approach to the task, showing initiative rather than seeking direction.

What particularly stands out to me is the high quality of Riyaan's work and his attention to detail. Both the POC prototype and the production board were fully functional on the first iteration. This was no accident, but a consequence of the engineering rigor and the methodical approach he followed.

In summary, Riyaan has all the skills and abilities needed to perform at the highest level, and I expect him to meet with success at your company, if hired.

Sincerely,

Kirill Mechitov
Chief Technology Officer
